Automatic Water Level Controller

Automatic water pump controller is a fully automatic water level controller. It controls water motor pump according to availability of water in overhead water tank. Two floating magnet sensor for sensing level of water in overhead tank is used. When level of water in overhead tank goes below

lower sensor, it automatically start water motor pump. And when level touches upper sensor, it automatically stop the motor pump.

Benefits:

1. **Save water (never overflows)**
2. **save electricity bill (never over run after filling the tank)**
3. **Save time (You don't need to wait to turn OFF motor pump when it will full water tank)**
4. **Keep your upper floor neat and clean (free from watery and wet)**
5. **keep your building wall save from decaying from staying wet from overflow waters**
6. **Be tension free because it will keep water available for always.**

Operating Mode List :

1. **Fully automatic water level control**
2. **Automatic stop timer control**
3. **Manual control (Switch ON or OFF any time as a usually motor pump)**
